DUSTICK INSTRUCTIONS

Please Read Before Using the Dustick

1. Remove canister from case and fill canister 3/4 full of dust for use of the target pest.
2. To assemble the Dustick, start with the canister and attach the blue snap button pole to the canister. Working your way upward, attach the black poles until you reach the desired height. The pump is installed last. **NOTE: DO NOT ASSEMBLE DUSTICK LAYING FLAT - DAMAGE TO HANDLE MAY OCCUR WHILE ATTEMPTING TO RAISE UP!** (You might want to lean the Dustick on a tree branch or side of house for balance until pole is completely set up.)
3. Aim tip away from house and pump once or twice to make sure dust flows out tip. With dust flowing, aim tip at desired target and pump handle until desired amount of dust is dispersed.
4. To dismantle, flow steps in reverse order-starting with pump working your way to head section. Store in canvas.

CAUTION

- Never place Dustick on or near power lines.
- Always wear proper safety equipment when dealing with any pest. Safety goggles, head net, gloves, etc.
- When using near windows, use caution not to accidentally bump windows or screens to avoid broken glass.
- Always read the label on any dust products you use and follow their instructions.
- Use caution when treating any wasp nest, making sure everyone and everything (pets, livestock, etc.) are clear of the area in case wasps attack.
- User accepts full responsibility for any abuse or misuse of this product.

NOTE: When using more than two sections-never use the Dustick in a sideways position. The tool was designed for reaching up, not out. Possible damage to handle and head may occur.
