

Product:	Rasta UG Sewer Bait Station
Weight:	6,1 kg
Chain length:	5,0 m
Base size:	220 x 220 x 10 mm
Total Height:	370 mm
Material:	Polypropylene + Stainless Steel

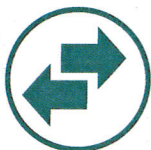

Description:

The Rasta UG is an innovative sewer bait station designed to effectively combat rats in sewers. This canal bait station is a quality product „Made in Germany“. The bait station is based on a sectional assembly and consists of a solid steel base, a housing with large openings, a controlled bait dish and a lid with an integrated tray.

Application:

The station is lowered into the sewer shaft on a 5 meter long link chain and is then attached to the shaft cover with a screw joint. The length of the station can be individually adjusted to the depth of the canal with the link chain. The solid stainless steel base ensures a stable position in the canal. As the water level rises, the bait dish rises along a pole into opposing lid. Seals on the bait dish and lid ensure that the bait is protected from contact with water. If the water level decreases, the bait dish lowers accordingly. With this innovative, self-adjusting design the bait remains dry and attractive to the rats.

Advantages:

Easy and quick
bait change

Easy access and attractive
bait presentation

Protected
design

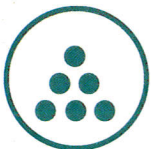

No tipping
over

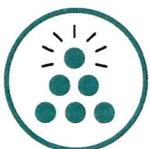

Quick and easy
cleaning

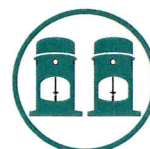

Durability

Large amounts of
bait possible

Long lasting bait
freshness and appeal

Optimal
storage
